

Memorandum

May 24, 2012

From: The Illuminating Engineering Society & The International Dark-Sky Association Re: January 30, 2012 MLO Revision

It has come to our attention that several undocumented changes were included in the January 30, 2012 revision to the Model Lighting Ordinance (MLO). The January 30, 2012 revision was intended solely to correct references to an obsolete TM-15 version. It appears that an incorrect version of the MLO was posted in error.

The IES and IDA regret any inconvenience this may have caused and the original June 15, 2011 has been restored to both websites. The January 30, 2012 version should be discarded. A correction to the MLO including citing that TM-15-11 supersedes TM-15-7 will be included in the next revision to the MLO.
